## Product Portfolio

## Company Profile

TRACO Electronic AG is a Swiss company with headquarters based in Baar, Switzerland. As a leading power supply specialist with more than 40 years experience we are dedicated to the design and manufacturing of high quality DC/DC and AC/DC power conversion products.

TRACO markets its products worldwide under the registered trademark TRACO POWER. Our mission is to provide our customers with optimal power supply solutions in terms of performance, quality and cost for their individual application.

## The varying levels of industrial power supplies

All power supplies designed for use in non-medical application are required to meet the international safety standards of IEC/EN/UL 62368-1. Industrial grade power supplies are subjected to increased requirements which vary depending upon their operating environment, typically divided into 2 categories, one for office / manufacturing environments and another for harsh/hazardous environments.

For power supplies in household applications, there are virtually no differences when it comes to insulation and operational safety. However, stronger electromagnetic and conducted disturbances are expected to arise in industrial environments, and electrical power supplies must be resistant to these. EMC immunity tests according to the generic standard IEC 61000-6-2 „immunity for industrial environments“ is the common denominator for a power supply being classified as industrial-grade.

### **The right product for the application and environment / standard products**

Traco Power offers a wide selection of standard industrial power supplies that are manufactured and tested according to the varying environments and applicable safety standards, allowing our customers to choose the power solution that is most cost-effective for their application and environmental requirements.

### **All our industrial rated power supplies provide following features as standard:**

- Safety approval according IEC/EN/UL 62368-1 (for 3000 VAC I/O isolation)
- EMC immunity according IEC 61000-6-2
- EMC emission according EN 55032 class B
- Protection against short circuit, overload and output over-voltage

### **Customer specific applications / customized solutions**

It is often not possible to find a standard power supply that fully complies with the respective requirements or without unnecessary features making the application more expensive. With our design company **TRACO POWER SOLUTIONS** we have a center of competence to develop and optimize power supplies for customer-specific requirements. The motto from our design team is “Reduced to the Max” and develop or modify a solution specific to your needs at the lowest cost of ownership.

# Non-Isolated Step Down DC/DC Converters (POL) in SIP Package

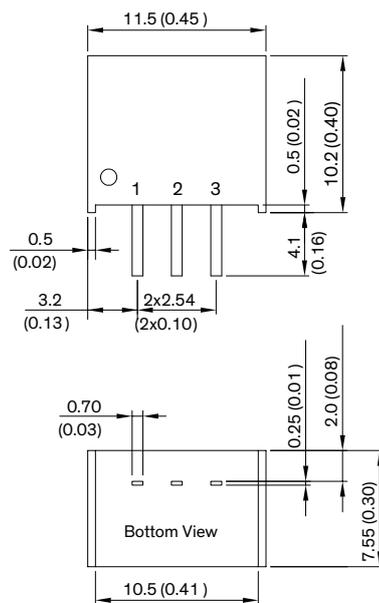

0.5 – 30 Amp

Our SIP-3 non-isolated/point-of-load regulators provide output currents up to 3 Amps with high-efficiency operation. Convection-cooled operation combined with the standard SIP 3/TO-220 pinout, make these true alternatives to less efficient linear regulators.

# High Power DC/DC Converters / RIA12 Surge Filters

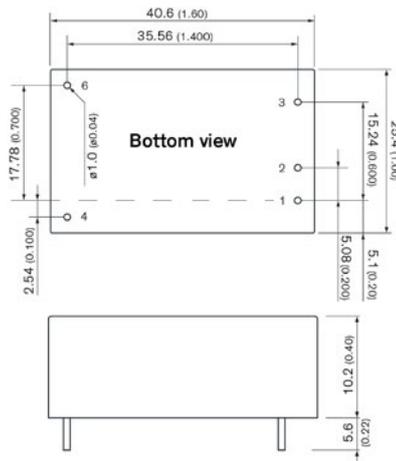

40 – 300 watt

The new TEP and TEQ series are ranges of compact high power DC/DC converter modules with 75 up to 240 Watt. They meet the stringent requirements for mobile and stationary railway applications in accordance to EN50155 Standard. The series comprise models with nominal 110 VDC input voltage (43-160 VDC). The rugged construction enables a reliable use in harsh industrial Environment and any transportation. Excellent efficiency and thermal management allow operation at high temperature without forced air cooling.

# Industrial DIN-Rail DC/DC Converters

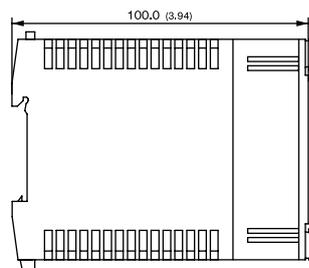

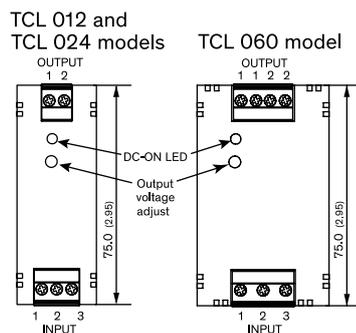

24 – 60 watt

In the TCL range of DIN-rail power supplies are 6 models for DC input voltage available. The wide input ranges of 9.5–18 VDC resp. 18–75 VDC means these models can be operated from all popular DC supply voltage systems. With tightly regulated output voltage these DC/DC converters provide a reliable power source for sensitive loads in industrial process controls, factory automation and other equipment exposed to a critical industrial environment. Further applications for these converters are isolation of a specific load or refreshing the 24 V bus voltage. Easy installation is provided with snap-on mounting on DIN-rails and detachable screw terminal block.
